

REPORT ON THE PROJECT

EVENT HIVE

The main target of this project was to implement the booking subsystem from a customer's perspective. Assuming that a user has already logged in, he/she will be able to pick a date from the calendar and book a venue on that particular date.

The use cases implemented in the project :

Browsing Subsystem:

- 1) View Company Profile

Booking Subsystem:

- 1) Display availability of date
- 2) Choose package
- 3) Place booking
- 4) Show confirmation message

Technologies used :

Front end: HTML and CSS

Back end: PHP

Framework: PHP Laravel Framework
